

CTF 7 — Stop Putting Everything on One Screen

Goal: Introduce Angular routing and separate the Student Portal into dedicated pages.

School Request

"Each student deserves a dedicated page."

Today's mission introduces **Angular Router**. Instead of keeping the entire Student Portal on one screen, you'll create separate pages for the student list, student details, and adding a new student.

You'll also practice navigating between pages using Angular routes.

Flag 1 — Prepare Your Mission

Objective: Create a new branch for today's challenge.

Create and switch to a new Git branch.

Branch name:

feature/routing

Screenshot:

- The command used to create and switch to the new branch.

```
PS C:\Users\nielj\my-first-angular-app> git branch feature/routing
PS C:\Users\nielj\my-first-angular-app> git checkout feature/routing
Switched to branch 'feature/routing'
```

Flag 2 — Build the Student List Page

Objective: Create a dedicated page for the student list.

Move your existing student list UI into a separate component/page.

Your page should display:

- Student cards
- Student information
- Active/Inactive status
- Existing actions

The Student List page will become the **main page** of the Student Portal.

Screenshot:

- Your Student List page displayed in the browser.

Flag 3 — Create the Student Detail Page

Objective: Create a separate page for viewing a student.

Create a new component for the Student Detail page.

For now, the page can display information such as:

- Student name
- Student ID
- Course
- Year level
- Status

You will later connect this page to a specific student.

Screenshot:

- Your Student Detail page displayed separately from the Student List.

Flag 4 — Create the Add Student Page

Objective: Create a dedicated page for adding students.

Create another component for:

Add Student

For this challenge, **do not create any form fields yet.**

The page can simply display:

Add Student

or

Add Student Page

 Screenshot:

- The blank Add Student page displayed in the browser.

Flag 5 — Open the Portal Gate

Objective: Configure Angular Router.

Add routes for your three pages.

Your application should have routes similar to:

`/students`

`/students/:id`

`/students/add`

The exact route configuration may vary depending on your project structure.

Screenshot:

- Your route configuration showing the three routes.

```
1 import { Routes } from '@angular/router';
2
3 import { Students } from './components/students/students';
4 import { StudentDetail } from './components/student-detail/student-detail';
5 import { AddStudent } from './components/add-student/add-student';
6
7 export const routes: Routes = [
8   {
9     path: 'students',
10    component: Students
11  },
12  {
13    path: 'students/add',
14    component: AddStudent
15  },
16  {
17    path: 'students/:id',
18    component: StudentDetail
19  }
20 ];
```

Flag 6 — Navigate Without Reloading

Objective: Add navigation between pages.

Create navigation links or buttons that allow the user to move between:

- Student List
- Add Student
- Student Detail

Use Angular's router navigation instead of manually changing the browser URL.

Hint:

routerLink

📷 Screenshot:

- Your navigation menu/buttons.

-
- The browser changing between pages without a full page reload.

-

Flag 7 — Give Every Student a Page

Objective: Navigate from a student card to its detail page.

Add a button or link to each student card.

Example:

View Student

When clicked, it should navigate to that student's detail route.

Example:

/students/1

/students/2

/students/3

You don't need to load different student data yet. The goal is to successfully navigate using a route parameter.

Hint:

:id

Screenshot:

- A student card with the View Student button.

-
-
- The resulting Student Detail URL/page.

Flag 8 — Build the Portal Navigation

Objective: Make the Student Portal feel like a multi-page application.

Your final navigation should allow users to move between:

Student List

Student Detail

Student List

Add Student

The Student List should remain accessible after navigating to other pages.

 Screenshot:

- Your complete navigation working between all three pages.

Flag 9 — Commit Your Progress

📸 Final Flag Screenshot

- Successful push to `feature/routing`.

```
PS C:\Users\nielj\my-first-angular-app> git push origin -u feature/routing
